PRESS RELEASE

NAVYA provides assistance for the legalization of three new Heliports in Spain.

Madrid. 08/05/2014

NAVYA has been selected by 3 different private developers to carry out the process of legalization of three new heliports in Spain.

The extensive experience of NAVYA in legalization and certification of aviation infrastructures, has been the reason behind its election by 3 heliport operators, completely independents each other, to carry out the legalization procedures required by the civil aviation authorities, for 3 Heliport projects located in different regions in Spain: Canary Islands, Castilla-Leon and the Basque Country

The heliports concerned are:

- Heliport of San Fernando (Gran Canaria): Designed as restricted Heliport is located in the
 municipality of San Bartolomé de Tirajana, Gran Canaria. The developer is TOP Helicopters,
 and the intended use is the air flight school and aerial work. The processing is in phase II
 corresponding to the environmental assessment, waiting for the response of the Ministry of
 Environment to move to Phase III.
- **Heliport of Andrea (Vizcaya)**: Heliport to be used to train pilots of helicopters and base for aerial work, located in the town of Menaka, Biscay, will be operated by LAN Helicopters. The processing is also in Phase II (environmental assessment).
- Heliport of Helicopter World (Segovia): This is a public use heliport to be located in the
 municipality of Castillejo de Mesleon, in the province of Segovia. Promoted by Helicopter
 World it is expected to be exploited as training school, helicopter maintenance center and
 base for aerial work. The legalization process is currently in Phase I (analysis of airspace
 compatibility) pending from AESA response to move to phase II.

These three projects are in addition to many other aviation-related infrastructure projects where NAVYA is working, at present, with airport operators in 3 continents.

NAVYA is a leading consulting firm, highly especialised in solutions for Aviation industry, including Airspace design, Flight Procedures, Airline Operations and Maintenance, Technical, Legal and Strategic assistance, Air Safety and Training for aeronautical-related companies, mainly, Airports, Air Operators and Air Navigation Service Providers.
